My stakeholder

Latam students' parents that want their children to study in the US, but don't know which school to apply for best fit & increase chance of acceptance
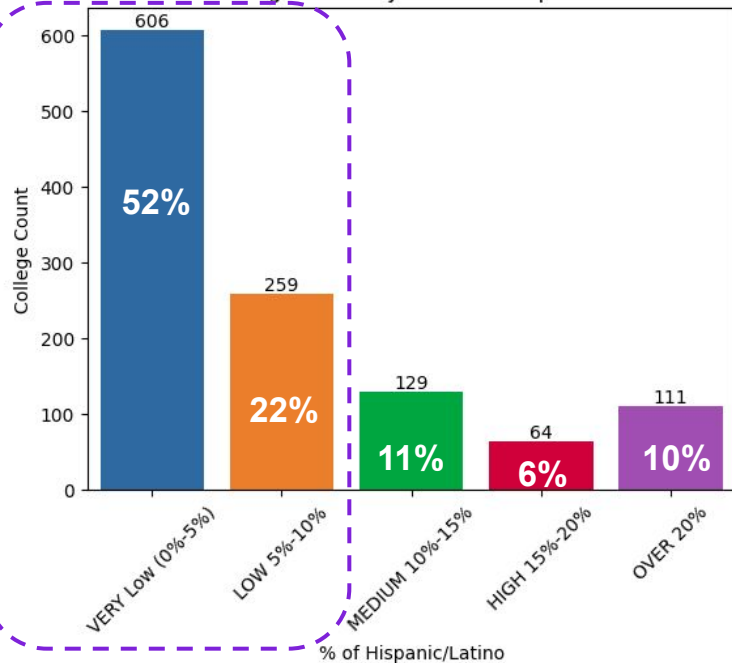

Our method are the best because of DATA!

Data ~1,200 schools in the US to understand which one: best fit for your child, probability of being accepted (acceptance rate, price, SAT score, location, etc)

US colleges are very competitive & expensive

College Count by the % of Hispanics

In 74% of schools, less than 1 in 10 student is Hispanic

College Count by Tuition

More than half are $20,000+/year, we can help you get scholarships!

Model Strengths & Limitations

Strengths

- The accuracy of our model to predict the school acceptance rate is 83%
- This means we have a deep understanding of each school's profile & acceptance requirements to get your child in!

Limitations

- The model does not include individual students data
- Gathering students' data over time will enable us to predict which students' profile will increase chances of acceptance

Start **early** to match your child's desired school to the school's profile

With data, we can help!
